Abstract of JP2001190585

PROBLEM TO BE SOLVED: To provide a male urine absorbing pad, highly effective for preventing the leakage of urine and easy to mount. **SOLUTION:** This male urine absorbing pad has a pad body consisting of a liquid permeable surface sheet 1, a liquid non-permeable back sheet 2 and an absorber 3 arranged between both sheets, and a water repellent cover sheet 6 arranged on the surface sheet. A central portion of the cover sheet 6 is provided with an slender opening 4 in the longitudinal direction. The peripheral edge of the outer periphery of the cover sheet 6 is joined to the surface sheet 1. Elastic members 5 are arranged on both side edges of the opening of the cover sheet in the state of being elongated. In this way, the cover sheet on the periphery side of the opening is separated from the surface sheet to form a void, where the opening is a male private part insertion port.
